California provides two methods for determining the amount of wages and salaries to be withheld for state personal income tax:

- METHOD A WAGE BRACKET TABLE METHOD (Limited to wages/salaries less than \$1 million)
- METHOD B EXACT CALCULATION METHOD

METHOD A provides a quick and easy way to select the appropriate withholding amount, based on the payroll period, filing status, and number of withholding allowances (regular and additional) if claimed. The STANDARD DEDUCTION and EXEMPTION ALLOWANCE CREDIT are **already** included in the wage bracket tables. Even though this method involves fewer computations than Method B, it cannot be used with your computer in determining amounts to be withheld.

METHOD B may be used to calculate withholding amounts either manually or by computer. This method will give an exact amount of tax to withhold. To use this method, you must enter the payroll period, filing status, number of withholding allowances, standard deduction, and exemption allowance credit amounts. These amounts are included in TABLES 1 through 5 of the EXACT CALCULATION section.

If there are any questions concerning the operation/methodology of Method B for computer software, you may contact:

SPECIAL NOTE FOR MARRIED EMPLOYEES WITH EMPLOYED SPOUSES: To avoid underwithholding of state income tax liability we recommend that you use one of the following options: Single filing status to compute withholding amounts for the employee and spouse; **or** withhold an additional flat amount of tax.

Instructions for additional withholding allowances for estimated deductions:

All additional allowances for ESTIMATED DEDUCTIONS that are claimed on a DE 4 must be used to reduce the amount of salaries and wages subject to withholding by using steps 1 and 2 shown below.

- Subtract the employee's estimated deduction allowance shown in the "TABLE 2 ESTIMATED DEDUCTION TABLE" from the gross wages subject to withholding; and
- 2. Compute the tax to be withheld using:

METHOD A - WAGE BRACKET TABLE METHOD; OR METHOD B - EXACT CALCULATION METHOD

Compute the tax to be deducted and withheld based on the total number of regular withholding allowances claimed on line 1(c) of the DE 4.

METHOD B - EXACT CALCULATION METHOD

This method is based upon applying a given percentage to the wages (after deductions) which fall within a taxable income class, adding to this product the accumulated tax for all lower tax brackets; and then subtracting a tax credit based upon the number of allowances claimed on the *Employee's Withholding Allowance* Certificate (DE 4). **This method also takes into consideration the special treatment of additional allowances for estimated deductions.**

The steps in computing the amount of tax to be withheld are as follows:

- Step 1 Determine if the employee's gross wages are **less** than, or equal to, the amount shown in "TABLE 1 LOW INCOME EXEMPTION TABLE." If so, no income tax is required to be withheld.
- **Step 2** If the employee claims any additional withholding allowances for estimated deductions on a DE 4, subtract the amount shown in "TABLE 2 ESTIMATED DEDUCTION TABLE" from the gross wages.
- **Step 3** Subtract the standard deduction amount shown in "TABLE 3 STANDARD DEDUCTION TABLE" to arrive at the employee's taxable income.
- Step 4 Use "TABLE 5 TAX RATE TABLE" for the payroll period and marital status to find the applicable line on which the taxable income is located. Perform the indicated calculations to arrive at the computed tax liability.
- Step 5 Subtract the tax credit shown in "TABLE 4 EXEMPTION ALLOWANCE TABLE"* from the computed tax liability to arrive at the amount of tax to be withheld.

*If the employee uses additional allowances claimed for estimated deductions, such allowances **MUST NOT** be used in the determination of tax credits to be subtracted.

- EXAMPLE A: Weekly earnings of \$210, single, and claiming one withholding allowance on DE 4.
- Step 1 Earnings for the weekly payroll period are LESS than the amount shown in "TABLE 1 LOW INCOME EXEMPTION TABLE" (\$306); therefore, no income tax is to be withheld.
- EXAMPLE B: Biweekly earnings of \$1,350, married, and claiming three withholding allowances, one of which is for estimated deductions.
- Step 1 Earnings for the biweekly payroll period are GREATER than the amount shown in "TABLE 1 LOW INCOME EXEMPTION TABLE" (\$1,224); therefore, income tax should be withheld.

- **NOTE:** Table 5 provides a method comparable to the federal alternative method for percentage calculation of withholding. This method is a minor simplification of the exact calculation method described above in that the tax rate applies to the total taxable income with the excess amount subtracted.

NOTE:

Employers may determine the amount of income tax to be withheld for an annual payroll period and prorate the tax back to the payroll period. This method may be useful to employers who have employees being paid for more than one payroll period and want to conserve computer memory by storing only the annual tax rates, wage brackets, deduction values, and tax credits.

NOTE:

Employers may determine the amount of income tax to be withheld for an annual payroll period and figure the tax for the payroll period. This method may be useful to employers who have employees being paid for a lump sum, or a yearly amount not withheld on and want to conserve computer memory by storing only the annual tax rates, wage brackets, deduction values, and tax credits.
